CS6083: Principles of Database Systems

Writing Queries in SQL, RA, and RC

NEW YORK UNIVERSITY

NYU

TANDON SCHOOL
OF ENGINEERING

■ **Topics:**

- **How to write queries using SQL, RA, RC**
- **How to move between SQL, RA, and RC**
- **Using nested subqueries**
- **Using set operations**

NEW YORK UNIVERSITY

**NYU**TANDON SCHOOL
OF ENGINEERING

■ Example Schema: Actor-Movie DB

Actor (aid, aname)

Movie (mid, mname, budget, gross)

ActedIn (aid, mid, starring, wage)

aid refs aid in actor, mid refs mid in movie

aid	aname

Actor

aid	mid	s	w

ActedIn

mid	mname	b	g

Movie

NYU

TANDON SCHOOL
OF ENGINEERING

■ Tuple-Relational Calculus:

- Query: ID of the actor with name “K. Bacon”

NEW YORK UNIVERSITY

NYU

TANDON SCHOOL
OF ENGINEERING

■ Tuple-Relational Calculus:

- Query: ID of the actor with name “K. Bacon”

$$\{ t \mid \text{Ex } a \text{ in Actor (} a[\text{aid}] = t[\text{aid}] \wedge a[\text{aname}] = \text{“K. Bacon”}) \}$$

Note: we use Ex “the exists”

Al “for all”

in “element of”

Also, switch from variable t to variable a to output only aid, as this is the only attribute of t that is referenced in the query.

NEW YORK UNIVERSITY

NYU

TANDON SCHOOL
OF ENGINEERING

■ Another Query, in DRC:

- ID and name of actors appearing in movie T2

NEW YORK UNIVERSITY

NYU

TANDON SCHOOL
OF ENGINEERING

■ **Another Query, in DRC:**

- **ID and name of actors appearing in movie T2**
- **Note: you need to “join” all three tables**
- **But how to do that in RC?**

NEW YORK UNIVERSITY

NYU

TANDON SCHOOL
OF ENGINEERING

"ID AND NAME OF ACTORS WHO APPEARED
IN T2"

$$\left\{ \langle aid, an \rangle \mid \langle aid, an \rangle \in \text{ACTOR} \wedge \exists mid, s, w \left(\begin{aligned} &\langle aid, mid, s, w \rangle \in \text{ACTED_IN} \wedge \exists b, g \left(\right. \right. \\ &\left. \left. \langle mid, "T2", b, g \rangle \in \text{MOVIE} \right) \right) \right\}$$

NYU

TANDON SCHOOL
OF ENGINEERING

■ **Some Variations on this Query:**

- **ID and name of actors appearing in T2**
- **How about “and where wage > \$500”?**
- **Or how about actors not appearing in T2?**

NEW YORK UNIVERSITY

NYU

TANDON SCHOOL
OF ENGINEERING

COMPARE TO RELATIONAL ALGEBRA:

$$\pi_{\text{RID}, \text{RNAME}} \left(\sigma_{\text{RNAME} = \text{"T2"}} \left(\text{ACTOR} \bowtie (\text{ACTED_IN} \bowtie \text{MOVIE}) \right) \right)$$

$$\text{JOIN vs. } \exists x, y (\langle x, y, \dots \rangle \in \dots)$$

NYU

TANDON SCHOOL
OF ENGINEERING

" ID OF ACTOR WHO HAS APPEARED
IN EVERY MOVIE "

" ID OF ACTOR WHO HAS APPEARED
IN EVERY MOVIE "

$$\{ \langle aid \rangle \mid \nexists mid, mn, b, g \left(\langle mid, mn, b, g \rangle \in MOVIE \right.$$

$$\wedge \nexists s, w \left(\langle aid, mid, s, w \rangle \in ACTED_IN \right) \}$$

OR

$$\{ \langle aid \rangle \mid \forall mid, mn, b, g \left(\langle mid, mn, b, g \rangle \in MOVIE \right. \\ \Rightarrow \exists s, w \left(\langle aid, mid, s, w \rangle \in ACTED_IN \right) \}$$

NYU

TANDON SCHOOL
OF ENGINEERING

RELATIONAL ALGEBRA :

NEW YORK

NYU

TANDON SCHOOL
OF ENGINEERING

RELATIONAL ALGEBRA :

$$\left(\pi_{\text{aid, mid}}(\text{ACTED_IN}) \right) \div \left(\pi_{\text{mid}}(\text{MOVIE}) \right)$$

NEW YORK

NYU

TANDON SCHOOL
OF ENGINEERING

■ **Set Operations in SQL:**

- **Union, Intersect, Except**
- **In, not in, some, all, exists, unique**
(used in nested queries)
- **“Actors who appeared in Star Wars I and II”**

NEW YORK UNIVERSITY

■ Set Operations in SQL:

- “Actors who appeared in Star Wars I and II”

```
( SELECT A.name  
  FROM Actor A, ActedIn AI, Movie M  
  WHERE A.aid = AI.aid AND AI.mid = M.mid AND  
        M.title = “Star Wars I” )
```

INTERSECT

```
( SELECT A.name  
  FROM Actor A, ActedIn AI, Movie M  
  WHERE A.aid = AI.aid AND AI.mid = M.mid AND  
        M.title = “Star Wars II” )
```

■ Set Operations in SQL:

- “Actors who appeared in Star Wars I and II”

```
( SELECT A.name
  FROM Actor A, ActedIn AI, Movie M
 WHERE A.aid = AI.aid AND AI.mid = M.mid AND
       M.title = “Star Wars I” )
```

INTERSECT

```
( SELECT A.name
  FROM Actor A, ActedIn AI, Movie M
 WHERE A.aid = AI.aid AND AI.mid = M.mid AND
       M.title = “Star Wars II” )
```

NYU

TANDON SCHOOL
OF ENGINEERING

■ Set Operations in SQL:

- Another solution:

```
SELECT A.name  
FROM Actor A, ActedIn AI, Movie M  
WHERE A.aid = AI.aid AND AI.mid = M.mid AND  
      M.title = "Star Wars I" AND A.aid IN  
  
( SELECT A.aid  
  FROM Actor A, ActedIn AI, Movie M  
  WHERE A.aid = AI.aid AND AI.mid = M.mid AND  
        M.title = "Star Wars II" )
```

NEW YORK UNIVERSITY

NYU

TANDON SCHOOL
OF ENGINEERING

■ Set Operations in SQL:

- Another solution:

```
SELECT A.name
FROM Actor A, ActedIn AI, Movie M
WHERE A.aid = AI.aid AND AI.mid = M.mid AND
      M.title = "Star Wars I" AND A.aid IN
( SELECT A.aid
  FROM Actor A, ActedIn AI, Movie M
  WHERE A.aid = AI.aid AND AI.mid = M.mid AND
        M.title = "Star Wars II" )
```

What if we use "NOT IN"?

NEW YORK UNIVERSITY

NYU

TANDON SCHOOL
OF ENGINEERING

■ Using Nested Query:

- “Actors who received the highest wage ever”

```
SELECT A.name
FROM Actor A, ActedIn AI
WHERE A.aid = AI.aid AND
      AI.wage >= ALL ( SELECT AI.wage
                      FROM ActedIn AI )
```

How about if we use “SOME” ?

NEW YORK UNIVERSITY

NYU

TANDON SCHOOL
OF ENGINEERING

■ Another Solution:

- “Actors who received the highest wage ever”

```
SELECT A.name
FROM Actor A, ActedIn AI
WHERE A.aid = AI.aid AND
      AI.wage = ( SELECT MAX(AI.wage)
                  FROM ActedIn AI )
```

NEW YORK UNIVERSITY

NYU

TANDON SCHOOL
OF ENGINEERING

■ Yet Another Solution:

- “Actors who received the highest wage ever”

```
SELECT A.name
FROM Actor A, ActedIn AI
WHERE A.aid = AI.aid AND
      NOT EXIST ( SELECT AI2.wage
                  FROM ActedIn AI2
                  WHERE AI2.wage > AI.wage )
```

Why is this not a good way to write this query?

NEW YORK UNIVERSITY

NYU

TANDON SCHOOL
OF ENGINEERING

■ Yet Another Solution:

- “Actors who received the highest wage ever”

```
SELECT A.name
FROM Actor A, ActedIn AI
WHERE A.aid = AI.aid AND
      NOT EXIST ( SELECT AI2.wage
                  FROM ActedIn AI2
                  WHERE AI2.wage > AI.wage )
```

Note: this is an RC approach to writing a query

NEW YORK UNIVERSITY

NYU

TANDON SCHOOL
OF ENGINEERING

■ Query Graphs, RC, RA, and SQL:

- “Actors who acted in a movie with Kevin Bacon where budget was > 1 million”

NEW YORK UNIVERSITY

NYU

TANDON SCHOOL
OF ENGINEERING

■ Query Graphs, RC, RA, and SQL:

- “Actors who acted in a movie with Kevin Bacon where budget was > 1 million”

High level view of query:

NEW YORK UNIVERSITY

NYU

TANDON SCHOOL
OF ENGINEERING

■ **TRC:**

$$\{ t \mid \text{Ex } a1 \text{ in Actor } (a1[aname] = t[aname] \wedge$$

$$\text{Ex } ai1 \text{ in ActedIn } (ai1[aid] = a1[aid] \wedge$$

$$\text{Ex } m \text{ in Movie } (m[mid] = ai1[mid] \wedge$$

$$m[budget] > 1000000 \wedge$$

$$\text{Ex } ai2 \text{ in ActedIn } (ai2[mid] = m[mid] \wedge$$

$$\text{Ex } a2 \text{ in Actor } (a2[aid] = ai2[aid] \wedge$$

$$a2[name] = \text{"K. Bacon"}))))) \}$$

NEW YORK UNIVERSITY

NYU

TANDON SCHOOL
OF ENGINEERING

SQL:

SELECT A1.aname

FROM Actor A1, Actor A2, ActedIn AI1, ActedIn AI2,
Movie M

WHERE <join conditions> AND M.budget > 1000000
AND A2.aname = "K. Bacon"

NEW YORK UNIVERSITY

NYU

**TANDON SCHOOL
OF ENGINEERING**

“Actors who acted in a movie $> 1M$ with someone who acted in a movie $> 1M$ with Kevin Bacon”

NEW YORK UNIVERSITY

NYU

TANDON SCHOOL
OF ENGINEERING

■ Query Graphs, RC, RA, and SQL:

- **“Actors who acted in a movie with Kevin Bacon where budget was > 1 million”**
 - **how about actors who acted with an actor who has acted with Kevin Bacon?**
 - **how about distance 3, 4, infinity?**
 - **transitive closure limitation**

NEW YORK UNIVERSITY
